

# Dark Web Monitoring Services

What you don't see, can hurt you. This is especially true of the Dark Web, the World Wide Web's shadow self that exists on darknets and requires special software, configurations, or authorizations just to see it. With the Dark Web offering all manner of stolen data, including intellectual property, financial account information, and Cleartext passwords, you have to ask yourself: is my organization's sensitive data out where I can't see it? Are cybercriminals lurking in the shadows searching for vulnerable spots to attack my network?

Digital Mountain's Dark Web Monitoring Services are exactly what you need to shine a light on the Dark Web. Our comprehensive, proprietary darknet search engine continuously scours the Dark Web for your company's data among the vast volumes of information available. Our services provide:

- Extensive historical data to enhance search accuracy
- Shortened detection time
- Identification of high-risk vulnerabilities attractive to skilled cyber attackers
- Experienced researchers and protection specialists
- Forum-limitation free processes and tools to go beyond the average Dark Web search

Data security risk assessments and risk analyses are incomplete without the protection of Dark Web Monitoring Services. Intellectual property theft can

slip by unnoticed without the skills of experienced detection teams. At Digital Mountain, we augment your existing IT department that may not have the time or the expertise to provide customized, around-the-clock monitoring of the Dark Web. We can simulate a hacker attack of your network to assess the security and reliability of your defenses, and make suggestions to remediate risks.

Our team has worked at some of the largest security and Fortune 1000 companies, such as E\*TRADE, Fidelity, and Symantec. Our consultants include experts on the darknet, network security, and digital forensics, all ready to assist you in protecting your valuable data.

Digital Mountain is a trusted security advisor to proactive organizations seeking a solutions partner for data and network security, and for incident response if you're already under attack. Whether you're looking to protect passwords, intellectual property, or your organization's good name, trust Digital Mountain to keep you on the right path.
